

# EARTH SOLE

Handcrafted Cyrounding Footwear

If you're not sure if you'll fit our standard sizes, or you'll choose the Full Custom option, you need to make sure to measure your feet the right way. So go ahead, print\* two copies of the following page at 100% scale. Get a tape measure and a pen and measure your feet the following:

1. To outline your foot, start your pen on the top line as indicated and draw the outline of your foot whilst keeping your pen upright at a 90-degree angle.

2. Measure the top of your foot and write down the measurements in centimeters at the 4 different lines.

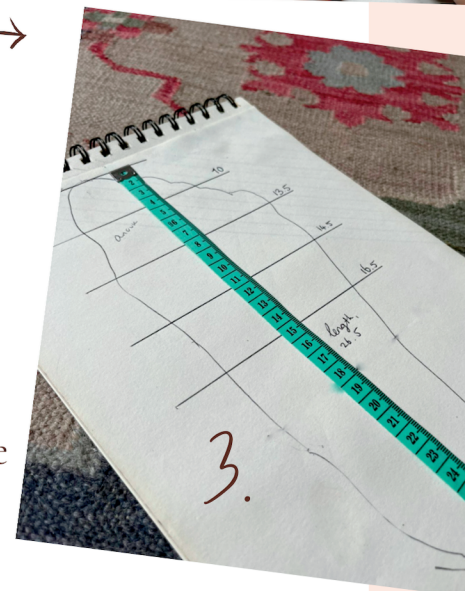

3. Then measure the length of your foot straight down the middle. The end result should look something like this picture

4. One done, now on to the next foot! Repeat the steps above. You might be surprised by the difference between them.

5. Scan or take a photo of your wonderful artwork directly right above, and send it back to us. With this, we will make your very own Earth Sole that will fit like a second skin.

\*Can't print or do your foot not fit on this page? No problem! Get an A4 and do it yourself. Get some guidance from the next page: draw the outline of your foot whilst keeping your pen upright at a 90-degree angle. Make 4 lines with 4 cm in between and follow the steps above.
